

Get involved in the Swiss Energypark today!

- Does your start-up deal with the future of energy networks?
- Are you researching an innovative solution that you would like to integrate in the existing grid?
- Have you already developed a product but are keen to deploy it in a test environment?

If so, the Swiss Energypark is your innovation, research and demonstration platform

The common goal of the project partners is to test new research projects in the field of energy and therefore to find innovative solutions for the future of energy. Your start-up has the opportunity to submit projects to the Swiss Energypark and to get involved as a player.

What does the Swiss Energypark offer start-ups?

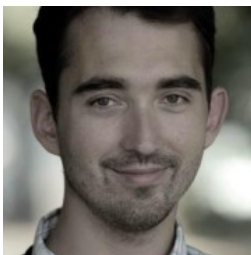

- The opportunity to apply new energy solutions in practice
- A region spanning 251 km² with just under 17,000 inhabitants
- The area produces 80% of its electricity requirements itself
- The region is predisposed to the practical application and piloting of innovative energy solutions
- Access to partners' know-how and expertise in the field of energy supply

Benefit from a strong network

BKW and the cantons of Jura and Bern are committed to providing targeted support for start-ups and projects in the field of new energy technologies and developing sustainable, innovative supply solutions. The Swiss Energypark coordinates and pools the interests and resources of all partners. These partners range from energy supply companies and economic development agencies in the cantons of Jura and Bern to universities and industry.

Together we can implement the energy strategy more quickly!

Don't hesitate to drop us a line.
We look forward to hearing from you!
